## Paco General

Paco's general service pumps are all designed with advanced features to yield the proven benefits of low life cycle cost, low installation cost, low operating cost, and low maintenance cost.

Utilizing design features such as double volutes, suction straighteners, and Francis vaned impellers throughout these product lines increases efficiency over all of the operating ranges, reduces radial loading, improves NPSH(R) characteristics, and provides minimal shock to allow the system to operate effectively, efficiently, and smoothly.
